Summary

Senior Front-End Engineer with 9+ years of experience designing and developing scalable applications using **React, TypeScript, and modern UI frameworks**.
Strong background in building **reusable design systems, complex data-driven UIs, and high-performance front-end architecture**.
Collaborative team player experienced in agile environments, cross-functional communication.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, JSX
Frameworks & Libraries: React, Next.js, Redux, React Query (TanStack), KendoReact, Material UI,Ant Design Bootstrap,Tailwind CSS,shadcn/ui
Testing: Jest, React Testing Library,Vitest
Cloud & Tools: AWS (Lambda, S3, API Gateway), Bitbucket, GitHub, Storybook, Git,Figma, Jira,Source Tree
Architecture: Micro Frontends, Component-driven Design, REST APIs
APIs & Data: REST APIs, API Integration, ClientnSide State Management
AI Tools: ChatGPT, GitHub Copilot, Claude, Cursor, AI-assisted debugging & code generation
Other: Performance Optimization, Agile/Scrum

Professional Experience

Control Gap Inc. – Ontario, CA (Remote)
Senior Front-End Developer *(Apr 2022 – Present)*

- Lead front-end architecture and development of enterprise **React + TypeScript** applications
- Partnered with UX and back-end teams to ensure consistency, accessibility, and maintainability across modules.
- Designed and implemented a **custom KendoReact component library**, standardizing UI across multiple products.
- Responsible for responsiveness and styling of the frontend, ensuring pixel-perfect layouts and cross-device compatibility.
- Improved performance through **lazy loading, memoization**, and **code splitting**, reducing bundle size by 25%.
- Writing tests ensures every UI component behaves as expected
- Mentored junior developers on best practices for TypeScript, React Query, and UI scalability.

Tech Stack: React, TypeScript, Next.js, KendoReact, Redux, React Query, REST APIs, Bitbucket, CSS Modules

Monark Group – Surrey, CA (Hybrid)
Front-End Developer *(May 2020 – May 2022)*

- Developed and maintained **e-commerce** and **prescription ordering systems** from concept to deployment.
- Built **reusable Material UI components**, improving development efficiency by 30%.
- Integrated **Storyblok CMS** to enable dynamic content management by non-technical staff.
- Ensured responsive and accessible UI for all devices.

Tech Stack: React, TypeScript, Next.js, Material UI, Storyblok, React Router, Git

Kater (Monark Group) – Surrey, CA (Hybrid)
Front-End Developer *(Sep 2019 – Jan 2020)*

- **Engineered reusable form components and custom React hooks** to modularize and accelerate user onboarding workflows.
- **Architected and maintained complex UI state management** using **Redux and Redux-Saga**, ensuring predictable data flow and scalable component interactions.
- **Developed fully responsive interfaces** leveraging **Bootstrap grid system, CSS variables, and media queries** for seamless cross-device adaptability.

Tech Stack: React, TypeScript, Redux, Redux-Saga, Bootstrap, CSS3, HTML5, Git

Planbox – Montreal, CA (On-Site)
Front-End Developer *(Oct 2015 – Feb 2018)*

- **Refactored and optimized** Agile Task Manager and Idea Manager React applications, improving **component reusability, rendering efficiency, and load times** for enterprise clients.
- **Implemented responsive layouts and modular Sass architecture**, leveraging **CSS animations, flexbox, and media queries** to enhance UX consistency across browsers and devices.
- **Collaborated with QA automation and R&D teams** to streamline **testing pipelines, debug complex UI issues**, and ensure **stable, production-ready releases**.

Tech Stack: React, JavaScript (ES6), Sass, CSS3, HTML5, jQuery, REST APIs, Git

---

Education

Bachelor's Degree in Computer Engineering Azad University of Naragh — Naragh, Iran

---

Key Contributions

Frontend Architecture Ownership
Led the architecture and development of enterprise React + TypeScript applications, defining scalable patterns and reusable components across multiple modules and teams.

Design System & Component Library
Designed and implemented a shared design system and KendoReact component library, standardizing UI patterns across multiple products and improving development efficiency.

Performance Optimization
Improved application performance through lazy loading, memoization, and code splitting, reducing bundle size by 25% and improving load time for data-heavy dashboards.

Reusable UI Architecture
Developed modular and reusable React components and custom hooks to support scalable, maintainable frontend architecture across multiple applications.

Cross-Team Collaboration & Mentorship
Mentored junior developers, conducted code reviews, and collaborated closely with UX and backend teams to deliver consistent, accessible, and high-quality user interfaces.

Highlighted Frontend Features

Netflix-Style List & Card Views
Implemented responsive card-based content views with smooth scrolling and dynamic layout behavior for large collections of items.

Dynamic Form Builder
Developed flexible, schema-driven dynamic forms supporting multiple input types, validation rules, conditional fields, and reusable form components.

Complex Data Grid Systems
Built and optimized large-scale data grids using KendoReact with features such as filtering, sorting, grouping, inline editing, virtualization-ready architecture, and custom cell rendering.

Hierarchical Data & Tree Views
Implemented expandable hierarchical structures and tree-based data navigation for complex datasets.

Reusable Component Library
Designed and maintained reusable UI components and shared patterns to standardize UI development across multiple products.

Performance-Optimized UI
Optimized rendering performance for data-heavy interfaces using memoization, lazy loading, and efficient state management.
